# Progress®

OpenEdge Pro2 5.0
Faster and Easier

OpenEdge Pro2 5.0 leverages OpenEdge Change Data Capture to simplify configuration and management and provide much faster replication speed.

- Replicates data to another database (only data, no schema)
  - User should not replicate entire database....best practice is to replicate only data needed
- Uses Change Data Capture or Replication Triggers to identify changed data
- For reporting purposes, not for Disaster Recovery
- Extract, transform and load using ABL
