

Platform Migration Services

Achieve maximum efficiency for your systems with a Progress Software Professional Services (PSPS) Platform Migration Service. PSPS is uniquely trained and qualified to implement solutions designed to enhance your business and maximize your investment in Progress® technology. No one knows Progress better than Progress Software Professional Services.

BENEFITS

- Fully realize the power of your new platform
- Improve your operational processes by increasing the functions of your application
- Rely on PSPS experts to move swiftly and confidently to optimize the migration advantages

OFFERING INCLUDES

- A comprehensive on-site assessment and plan for your application environment
- Review of your code
- Installation of your new Progress software
- Migration of your application and source code
- A final functionality check

In today's highly competitive environment, you need to gain any advantage you can to overcome your competition and manage your business to success.

That advantage can come from superior products, expert industry knowledge, dedicated customer service, or efficient business operations. Making sure your operations are running to full efficiency starts with flawlessly running systems.

Progress Software Professional Services has developed the Platform Migration Service to provide our partners and end users with the services and expertise to quickly move an application to a new software platform. PSPS consultants are seasoned service professionals with years of experience in migrating Progress platforms around the globe.

The Progress Software Platform Migration Service

Our migration service allows you to continue focusing on your day-to-day responsibilities while our highly skilled consultants apply their global expertise to complete platform migrations for your organization. Our staff will:

- Align the migration with your strategy and operational needs
- Use consistent methodologies and practices for dependable and repeatable migration solutions
- Expedite your software platform migration based on real-world expertise
- Perform discovery and reporting of the application environment for an efficient migration

- Complete a functionality check of the migration to ensure all changes meet acceptability standards and functions are fully operational

Project Scope

The platform migration work occurs in two phases and is time dependent – based on the complexity of your systems. Phase One involves a comprehensive assessment and plan for the application environment. Information is gathered, analyzed, and documented with your strategies in mind. The migration is then planned which includes the review of your code, estimation of project parameters, allocation of resources, and definition of the methodologies to be utilized for a successful platform migration.

Phase Two, the project phase, implements the plans by installing the Progress software, migrating the application and source code, and performing a functionality check.

Deliverables

- A platform migration assessment and plan that details deliverables, timetables for action, and allocation of resources
- Installation of your new Progress software platform
- A platform migration report of completed work, including recom-

recommendations for on-going support, future enhancements, and training alternatives

Options Available for this Service

- Installation of new Progress software versions
- Project management of the entire internal and external team

Services for Future Consideration

- Web enablement services that assess, plan, develop, and deploy Web-enabled applications
- Plans for integrating Progress messaging software SonicMQ® and/or XML messaging into the migration solution
- Internationalization of your application (customizing your application for local languages and practices)
