

An End-to-End Model-Driven Platform: Progress Rollbase + Progress Corticon

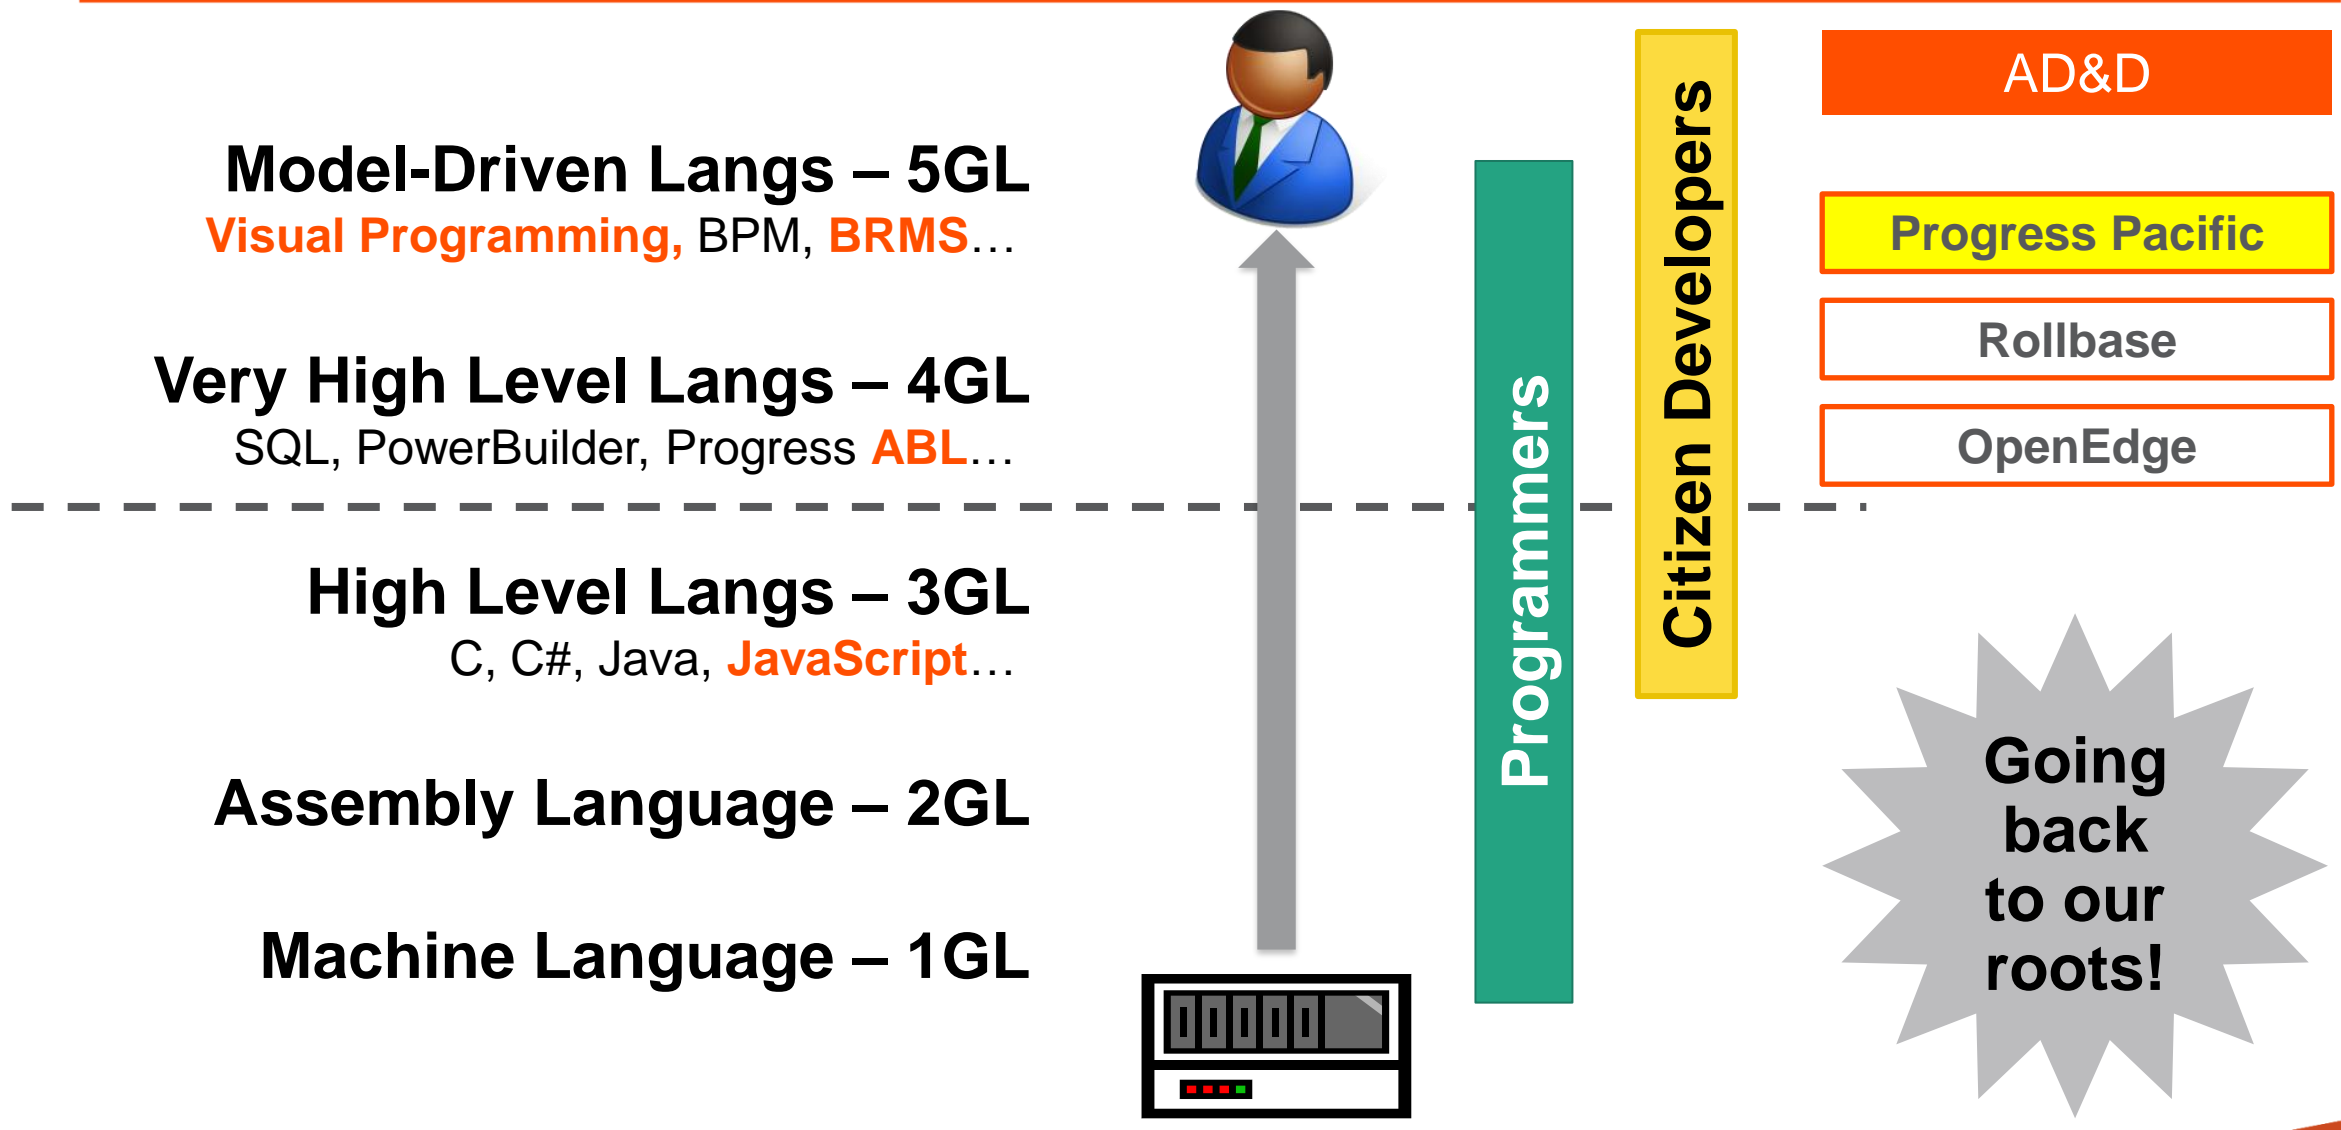

Pedram Abrari
VP of Engineering, Rollbase
Former CTO of Corticon
October 8, 2013

PROGRESS
EXCHANGE 2013
DISCOVER. DEVELOP. DELIVER.

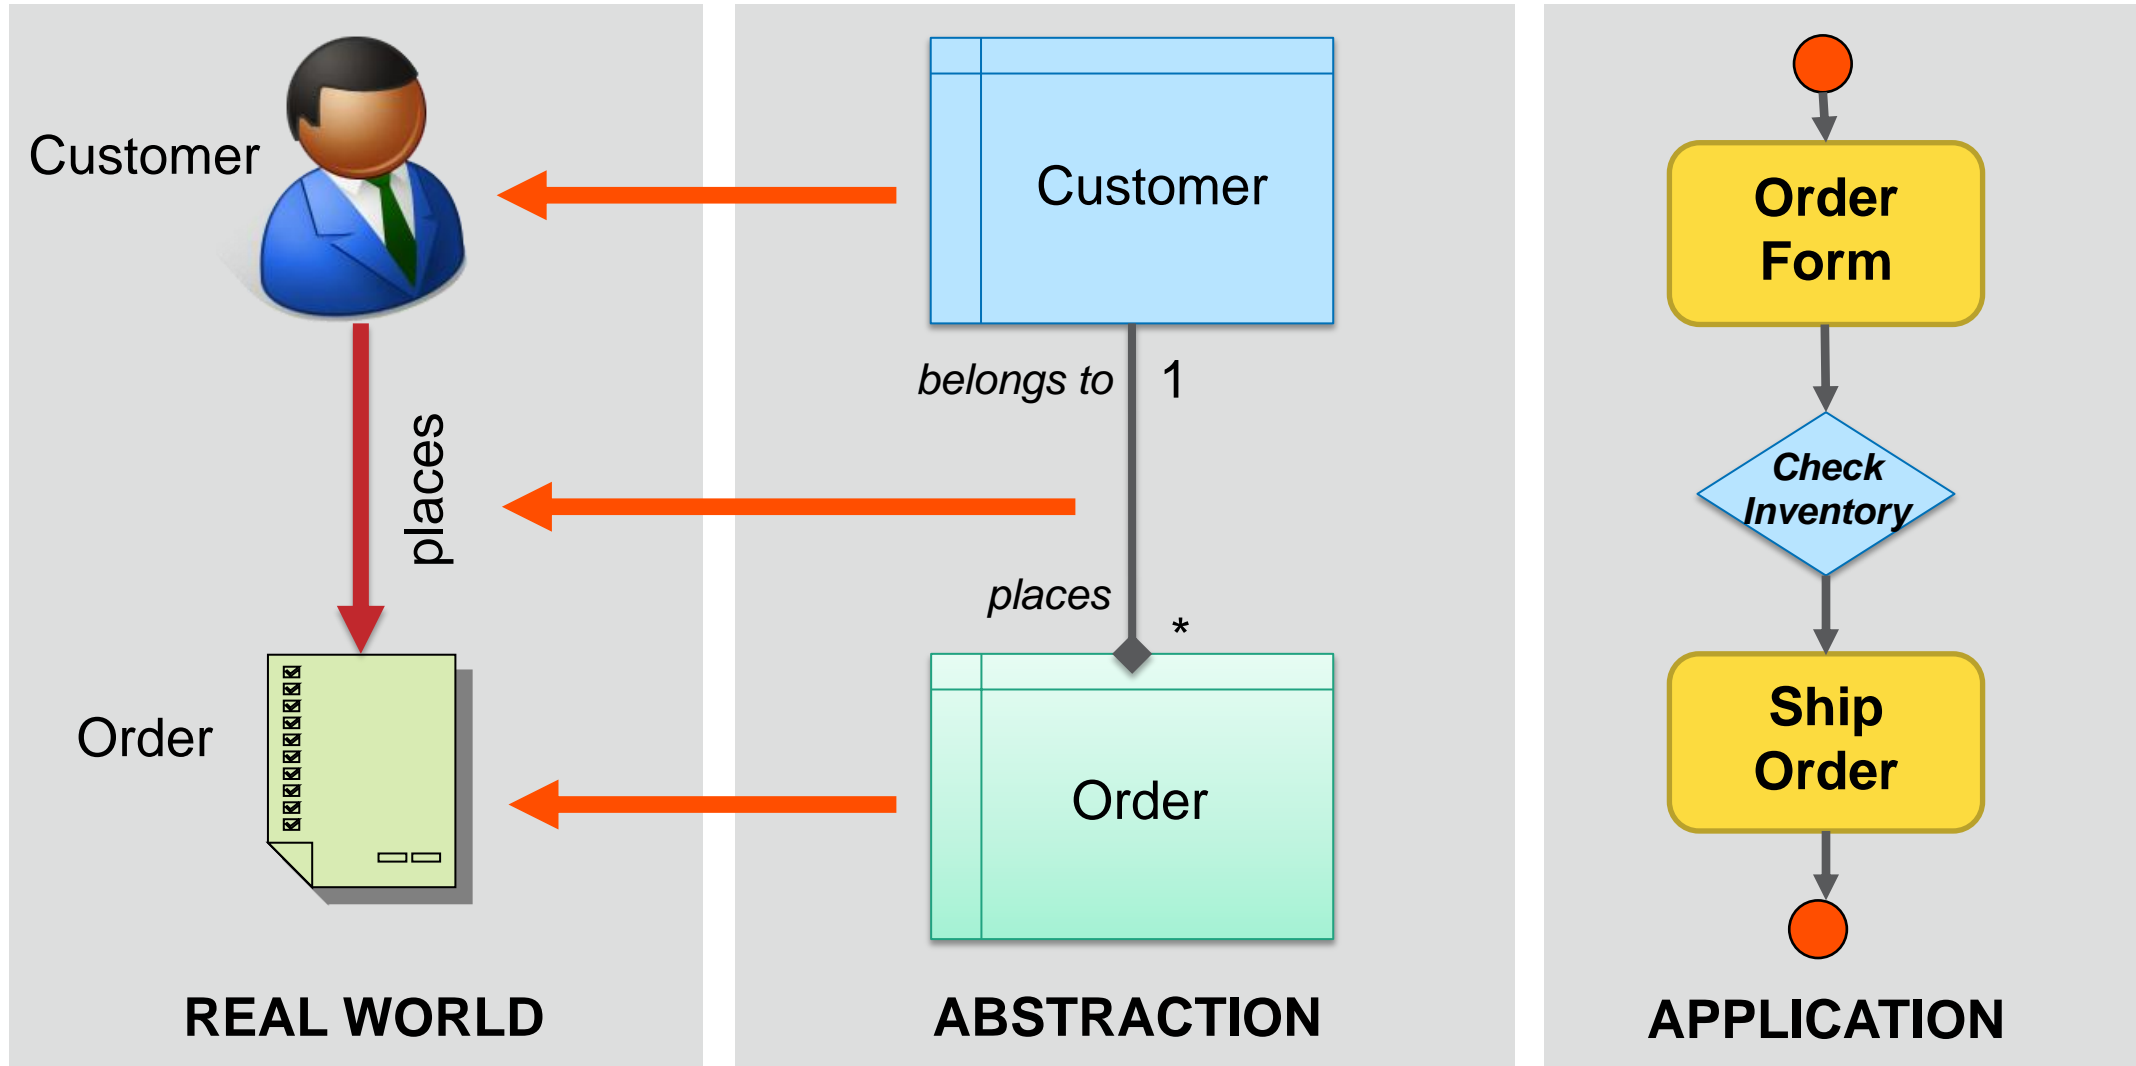

Agenda

- Overview of Model-Driven Architecture
- Introduction to Business Decisions and Rules
- Progress Rollbase + Progress Corticon
- 2014 Roadmap

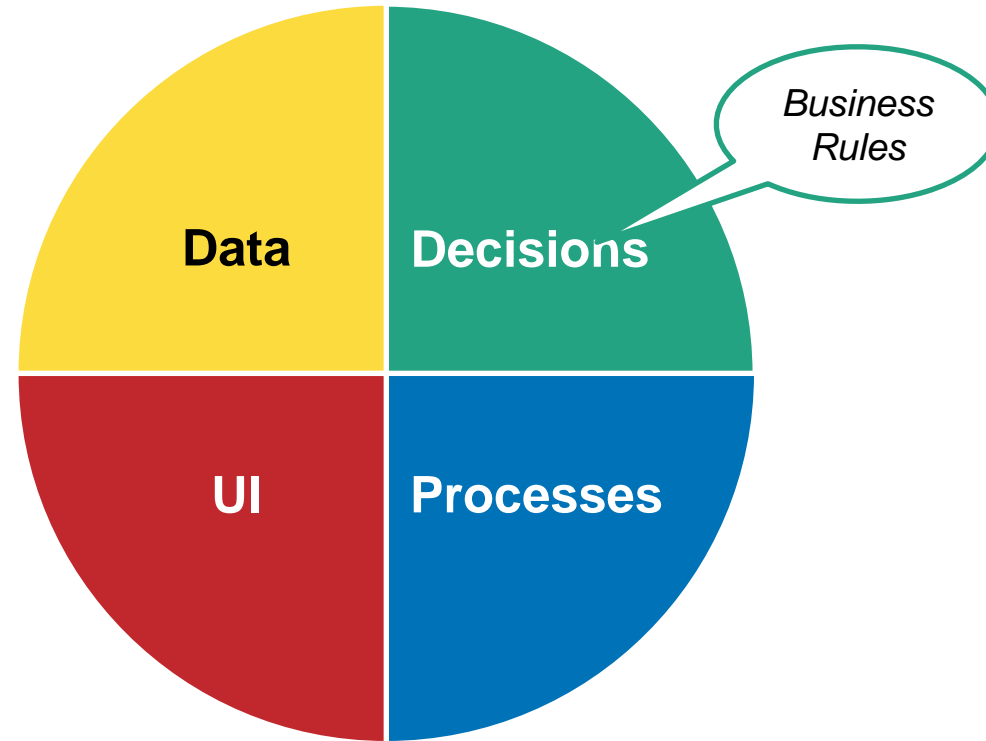

Generations of Programming Languages

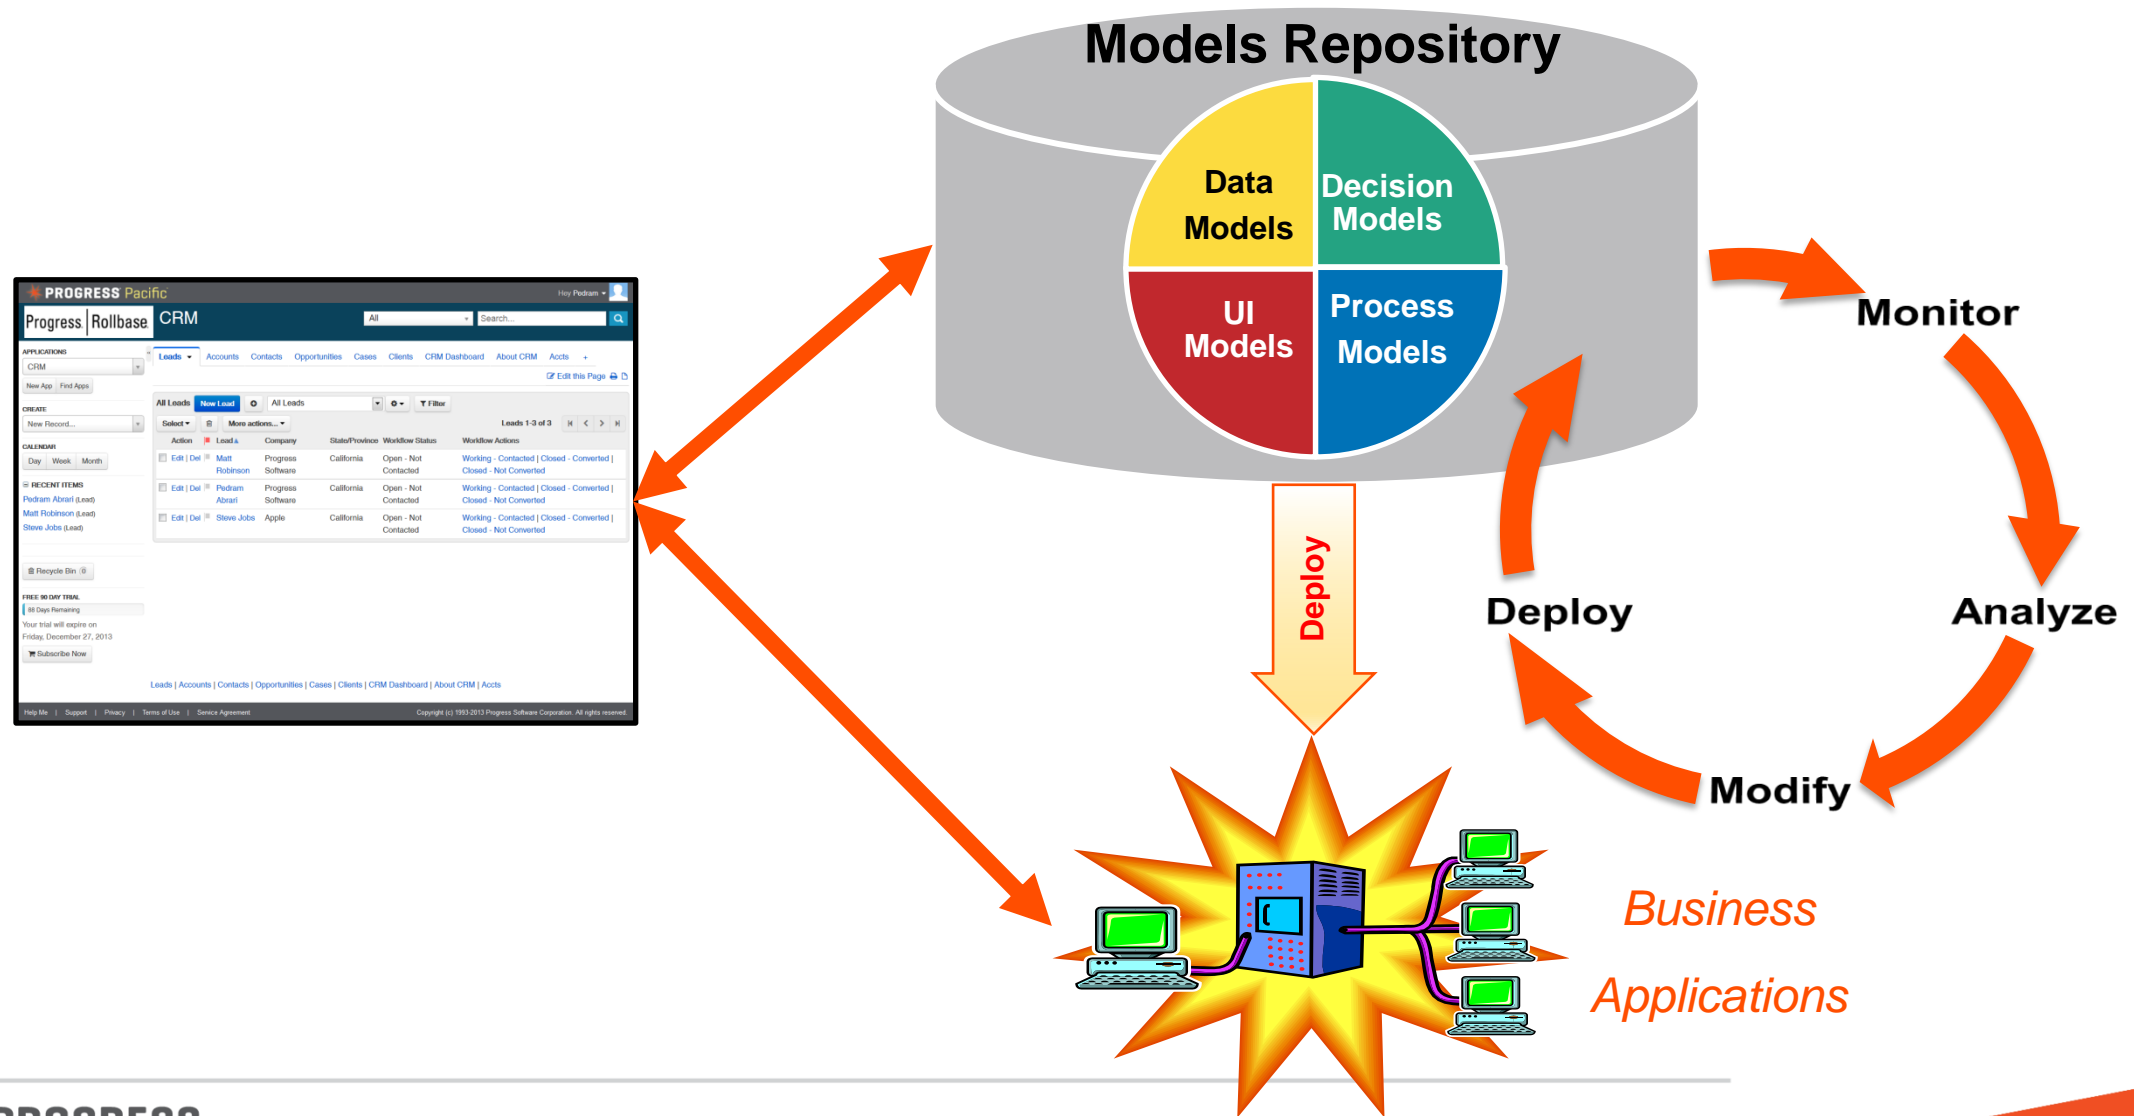

What Are Models?

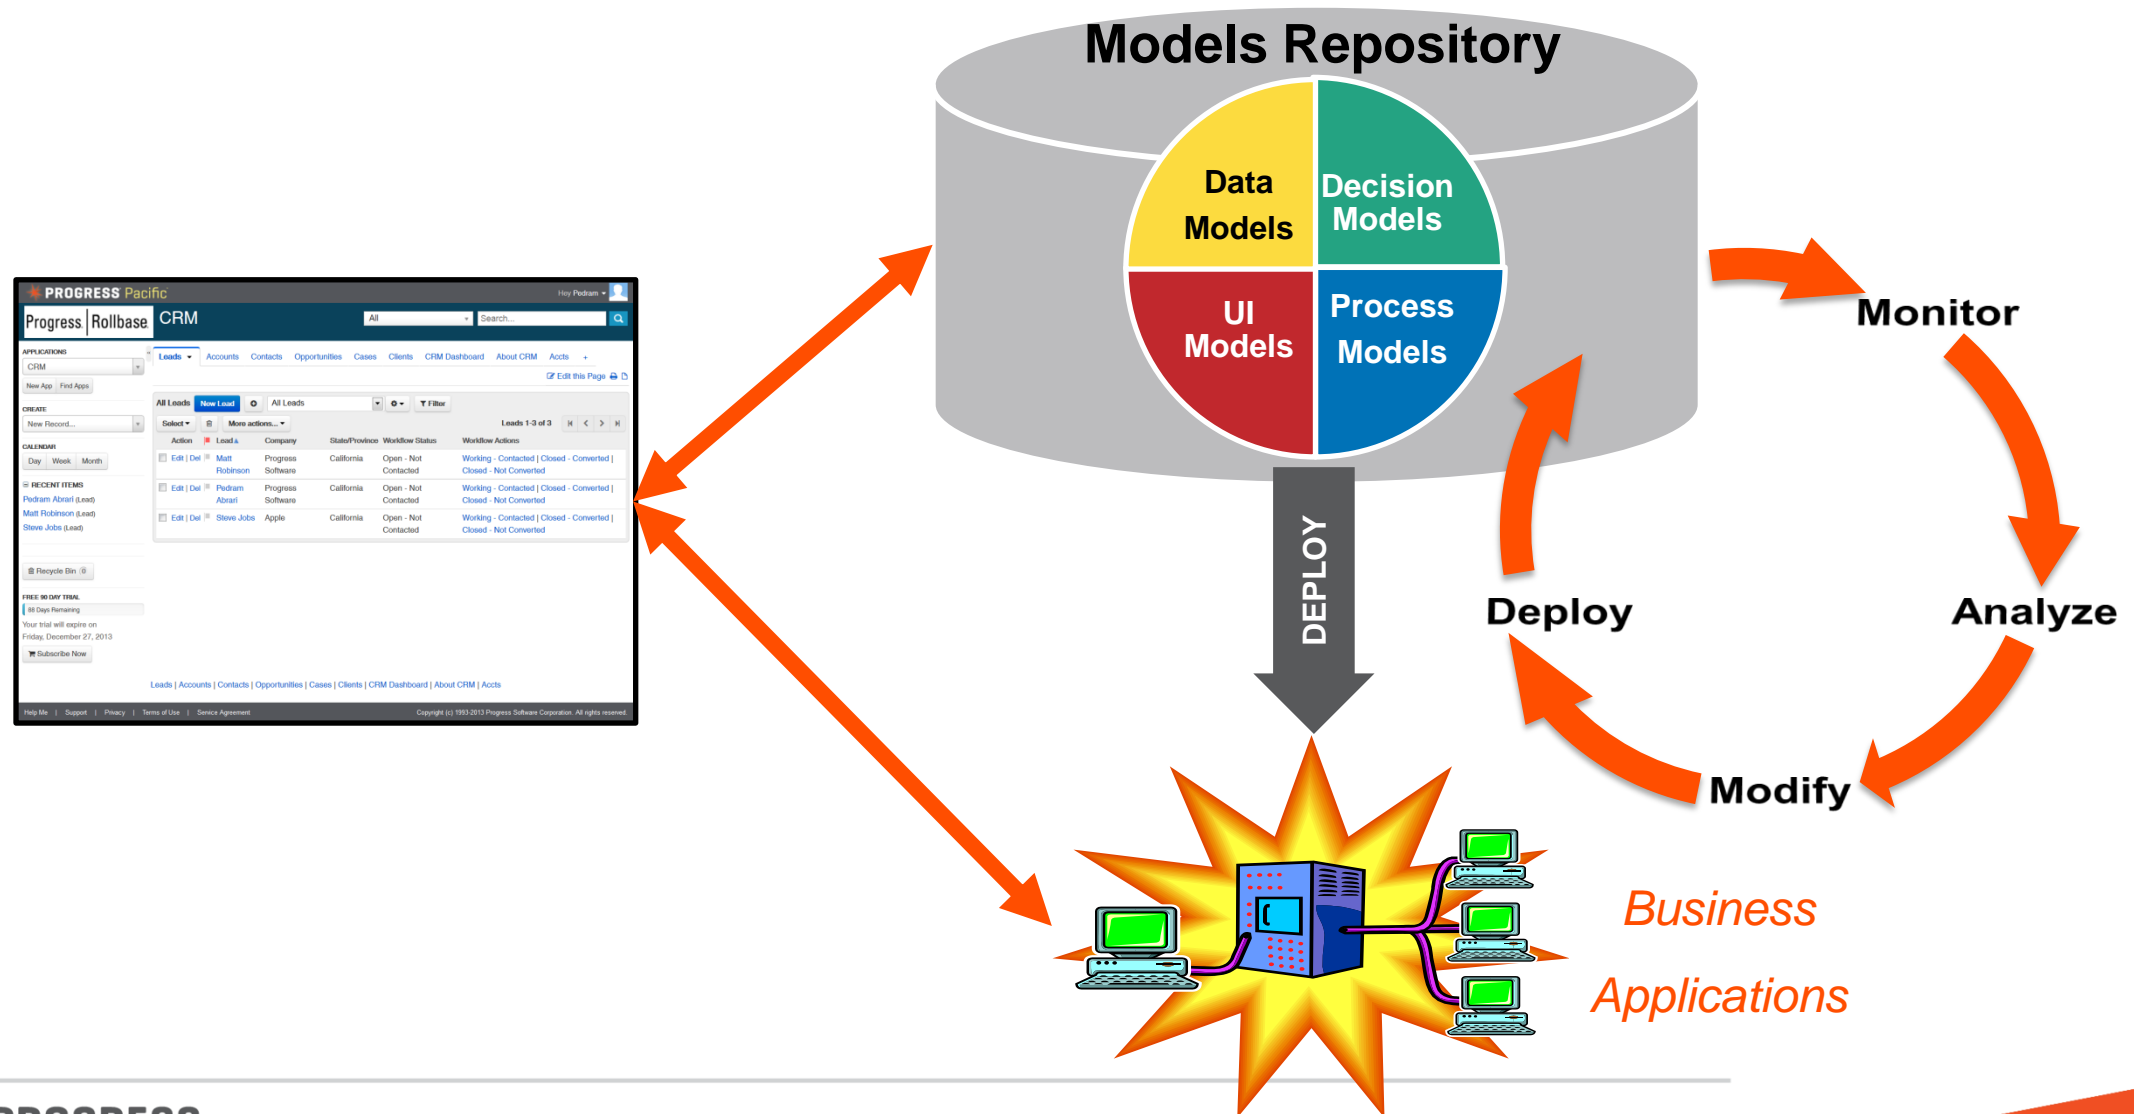

Application Modeling

A Model-Driven Architecture

A Model-Driven Architecture

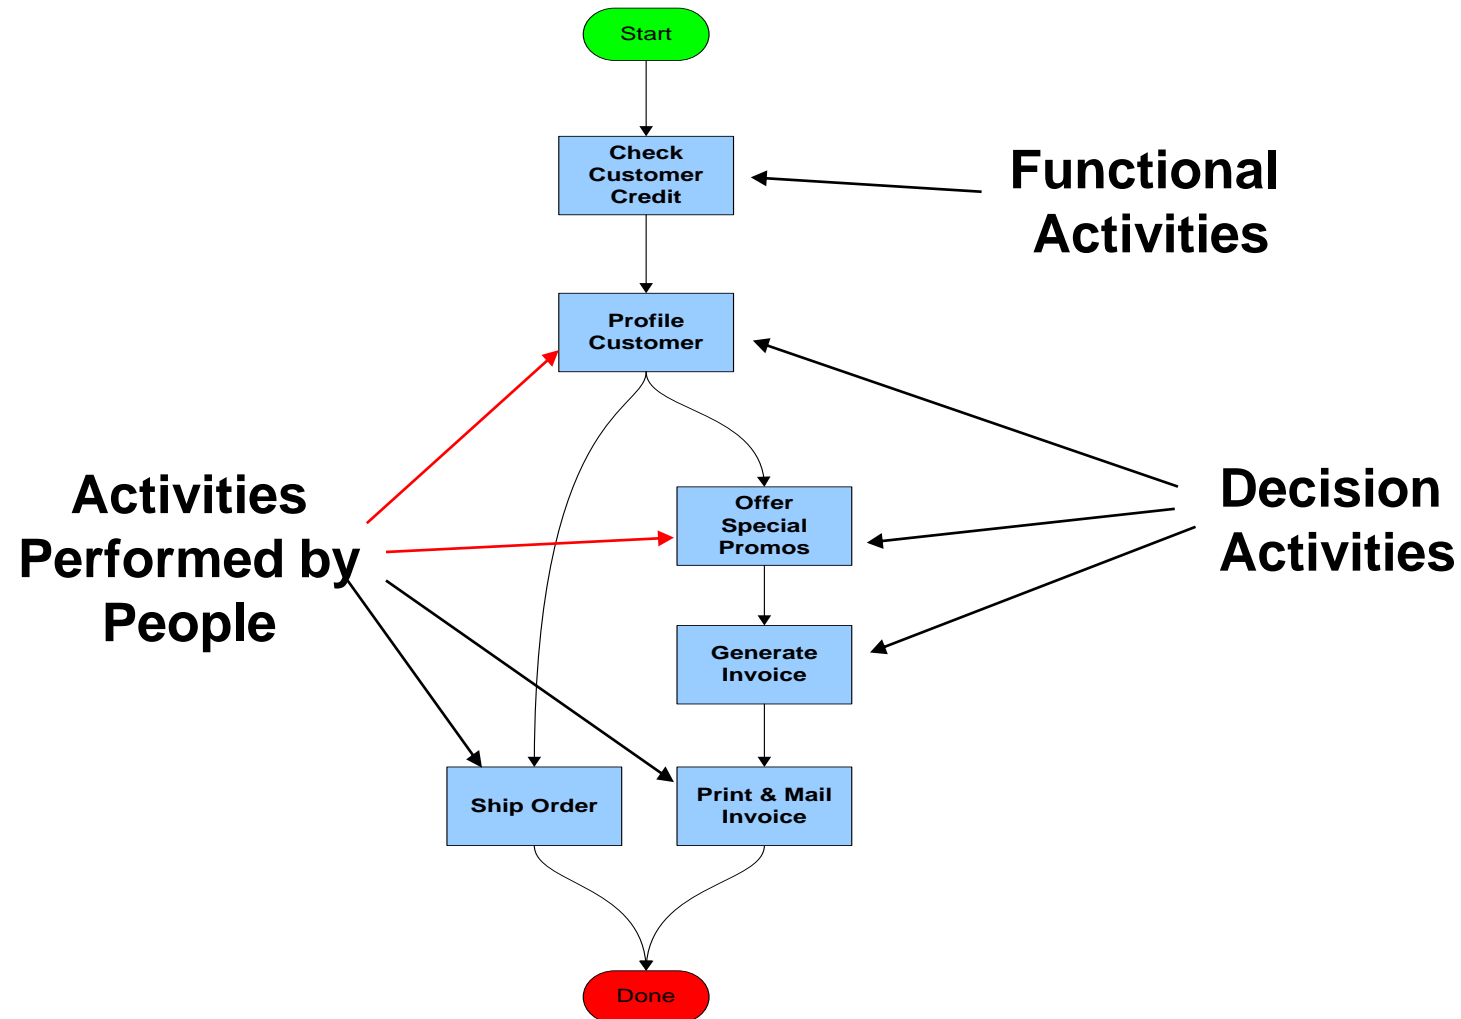

Progress Rollbase Server-side Business Logic

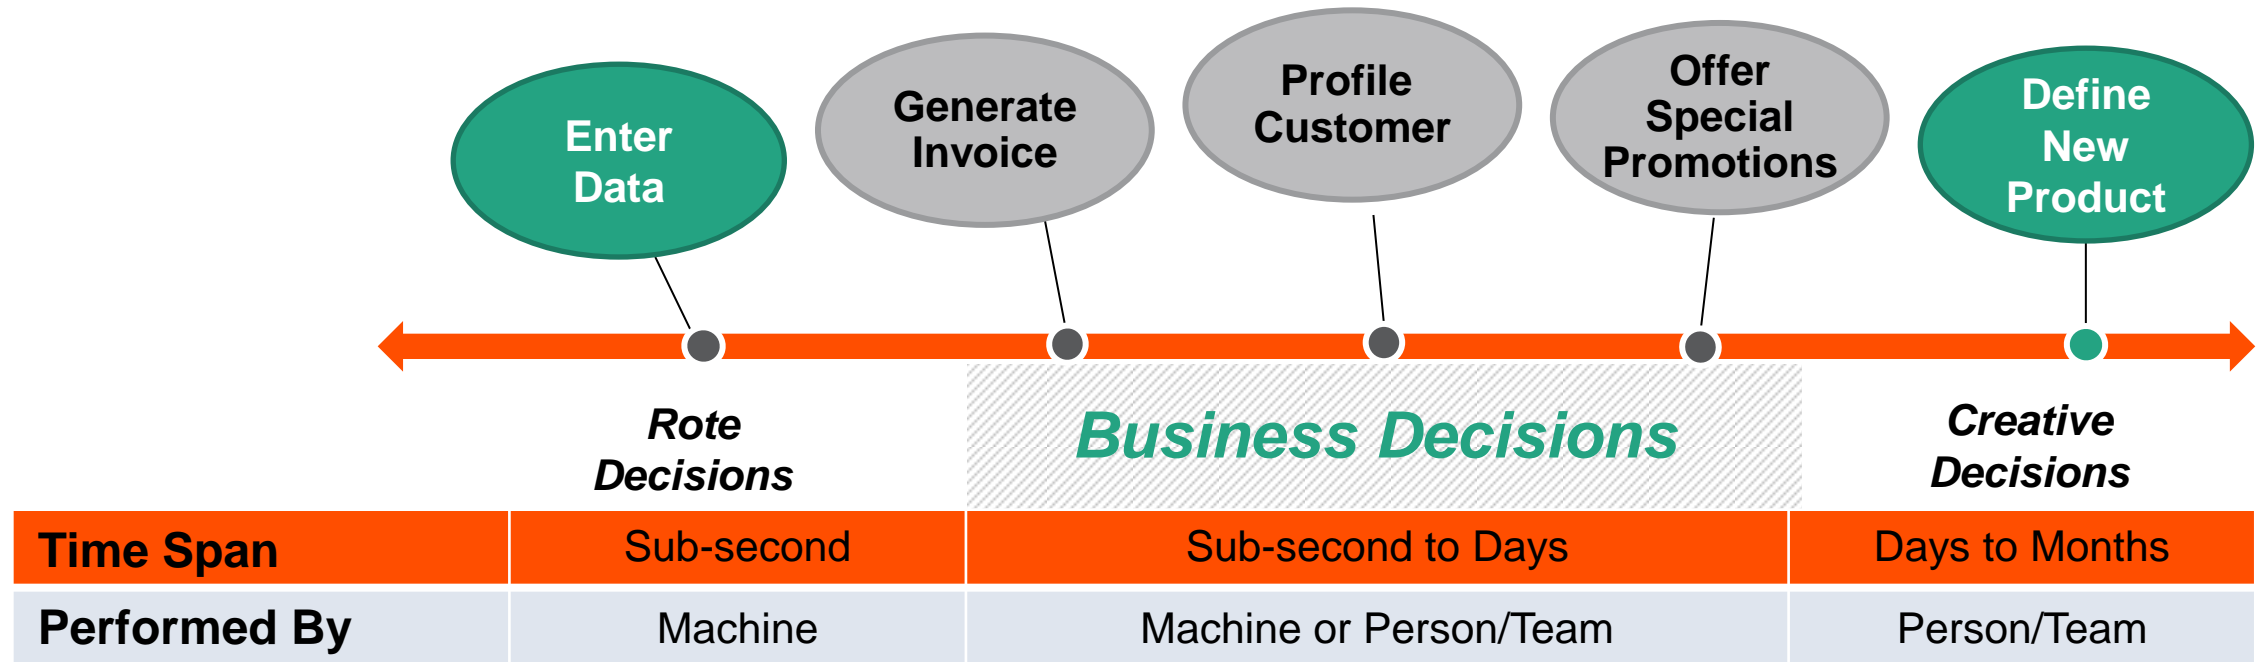

Agenda

- Overview of Model-Driven Architecture
- Introduction to Business Decisions and Rules
- Progress Rollbase + Progress Corticon
- 2014 Roadmap

Business Activity Types in a Typical Business Process

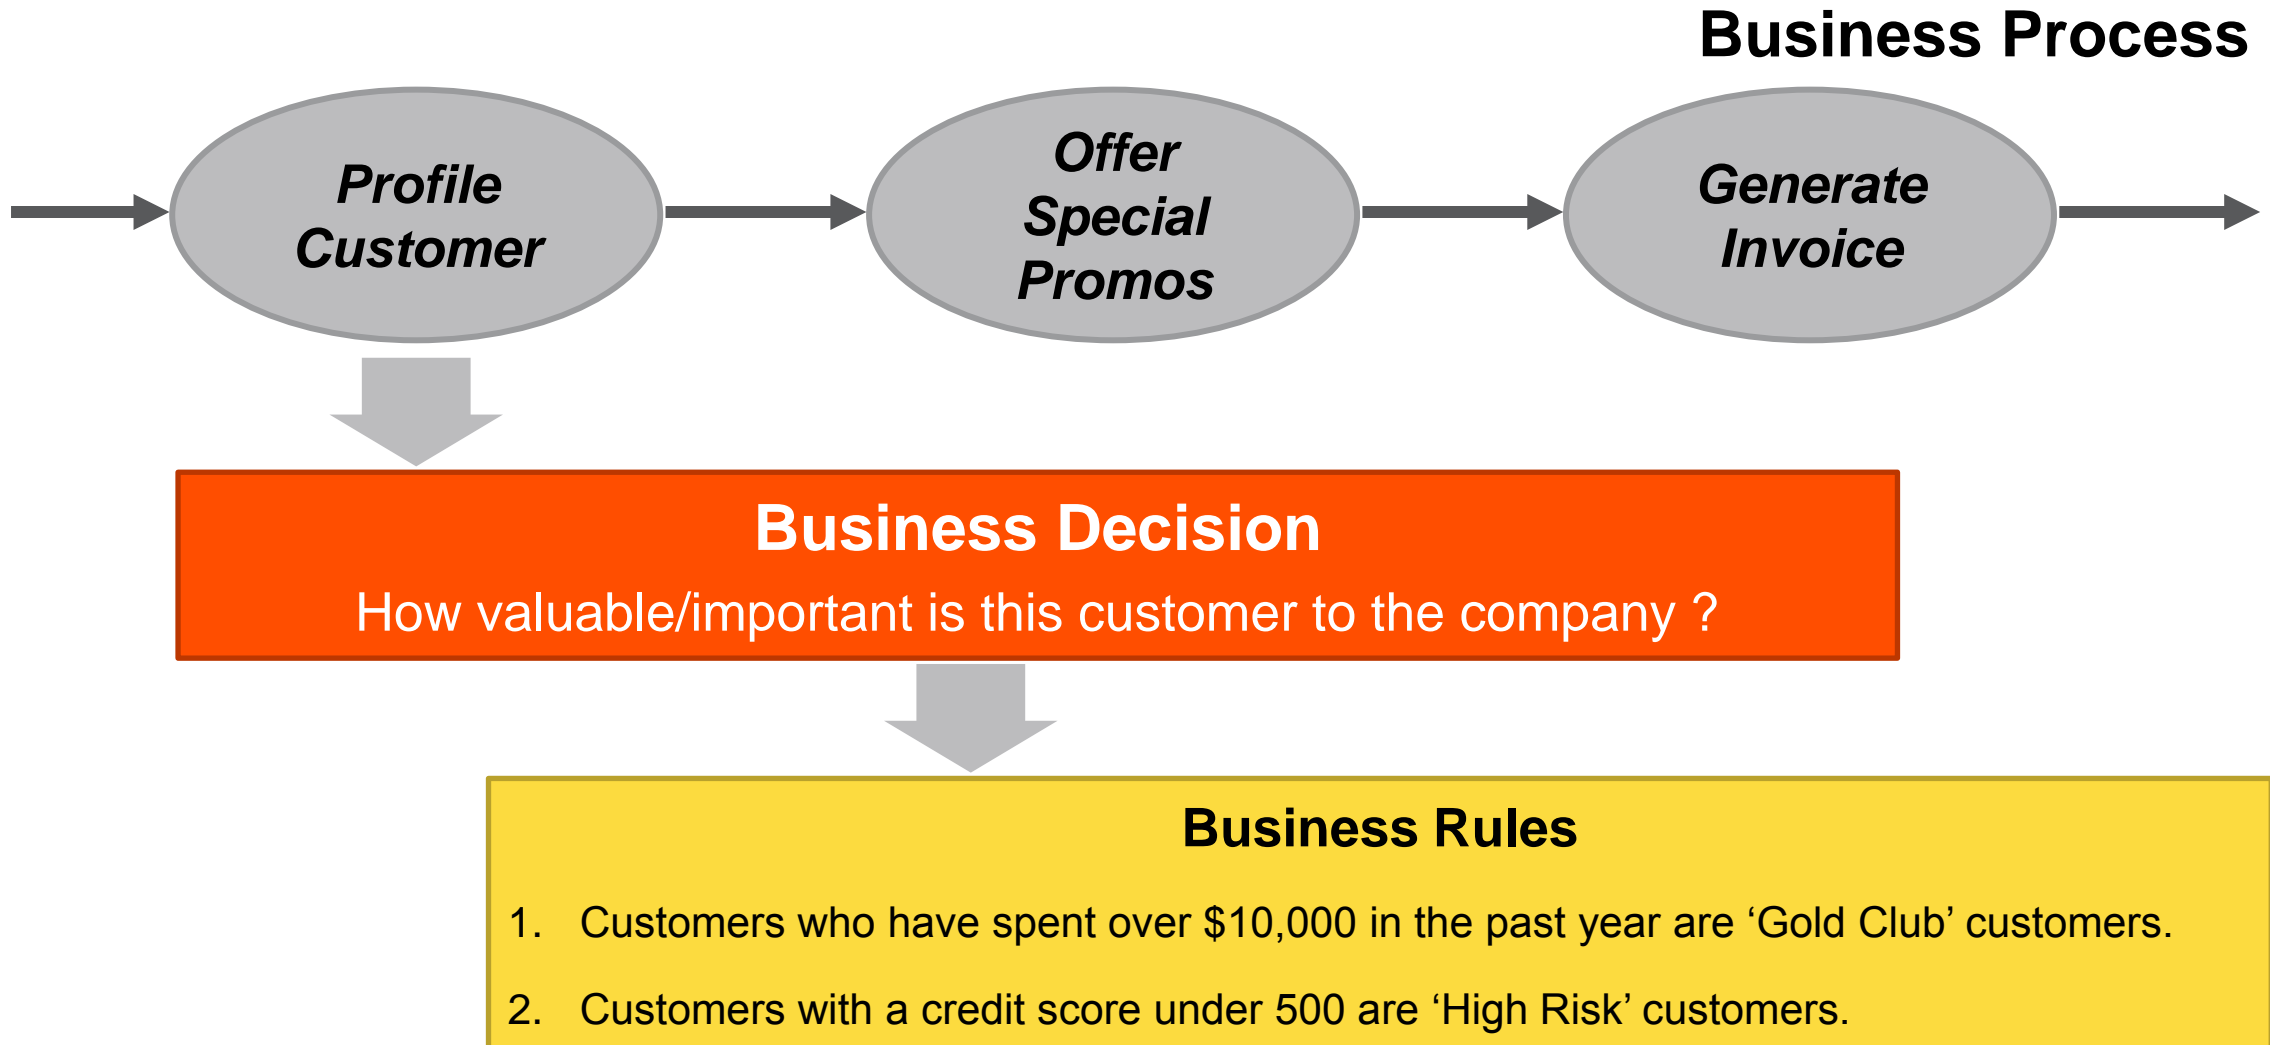

Decision Activities Resist Traditional Automation

Up to 70% of core business processes are business decisions

Internal Study based on IBM IAA Framework

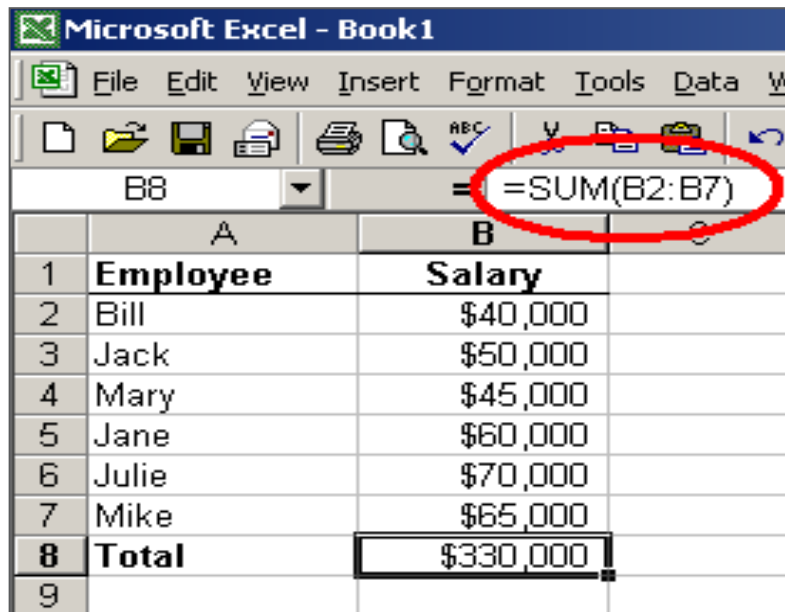

Business Decisions Are Composed of Business Rules

Declarative vs. Procedural Paradigms

Declarative Paradigm

- **What Needs to be Done**
 - Business Rules Captured as a Set of Discrete Rules
- Spreadsheet Example: Sum

The screenshot shows a Microsoft Excel spreadsheet titled "Book1". The formula bar displays "=SUM(B2:B7)", which is circled in red. The spreadsheet data is as follows:

	A	B
1	Employee	Salary
2	Bill	\$40,000
3	Jack	\$50,000
4	Mary	\$45,000
5	Jane	\$60,000
6	Julie	\$70,000
7	Mike	\$65,000
8	Total	\$330,000
9		

Procedural Paradigm

- **How to Do It**
 - Business Rules Hard-coded into Application Logic
- Code Example: Sum

```
Integer i
Float tmp

tmp = 0
For i = 2 to 7
    tmp += B[i]
Next I

B[8] = tmp
```

“WHAT Not HOW” C.J. Date

Progress Pacific 2014 Roadmap

Deeper Integration of Rollbase + Corticon

- Embedded Corticon Rule Engine within Rollbase Platform
- Share Object Model
- Decision Triggers
 - Invoked based on Object Lifecycle events
 - As standalone invocation
- Web-based Decision Modeling within Rollbase Platform
- Support for Fully Model-Driven Application Development
