

# WHAT'S NEW PROGRESS CORTICON 5.7

## HIGHLIGHTS

- ✓ Simplify batch processing of rules with Advanced Data Connector (ADC)
- ✓ Access data sources seamlessly using the Corticon Enterprise Data Connector (EDC) at no additional cost
- ✓ Provide essential information for rule design and development with rich comment features
- ✓ Drive productivity with new enhancements designed to improve usability

Organizations are driving harder than ever to increase effectiveness and agility in business operations, with business rules playing a pivotal role in this process. The ease with which you can capture, change and optimize these business rules either promotes or inhibits the agility of your organization. It also impacts the consistency, quality and speed of your decisions—which goes straight to your bottom line.

Whether you're on-boarding new customers, processing claims, determining product configurations or assessing program eligibility, business rules management is critical to success. With Progress® Corticon® 5.7, you'll be able to manage these crucial business decisions much more efficiently.

## Simplify Batch Processing of Business Rules

Ease the arduous task of batch processing vast amounts of data for regular reconciliation, analysis and auditing of rules. With Advanced Data Connector (ADC), you are better equipped to manage queries and manipulate large data set results. Map a Vocabulary to multiple data sources, and a new single data source configuration file provides the connection parameters for the data sources used in a Decision Service. The file can be exported from a Vocabulary after a data source has been added and mapped, and data source connection parameters can be imported to a Vocabulary using the new data source configuration file.

## Access Multiple Data Sources Seamlessly—for FREE

Corticon Enterprise Data Connector (EDC) is now available to you at no additional cost. The power of EDC enables you to connect decision services to external data sources such as relational databases and provide seamless enterprise-wide data access for integrated business rules.

By eliminating costly, time-consuming data integration middleware and complex SQL custom coding, you are better able to:

- Execute more decisions with greater speed and reliability
- Gain efficiencies through minimized integration effort
- Comply with decision-related regulations with greater efficiency and consistency

## Document Rule Assets with More Detail

The new Comments View feature in Corticon Studio supports the ability to provide essential information as you design and develop rule assets. Increase efficiency and improve governance while you create and maintain information that documents the rule assets of a project. Comments are tied to specific requirements for stakeholders, including colleagues tasked with modifying inevitable changing business requirements. Bundled plug-ins enable you to integrate your project with GitHub or CVS.

## Increase Developer Productivity

Designed to minimize IT pressures, Corticon is now even easier to use for citizen developers and business analysts who are often tasked with managing ever-changing business rules. Driven by customer enhancement requests, you'll find significant usability improvements in our latest release, including:

- The ability to refactor a Vocabulary entity, attribute, or association name so that each change is automatically applied everywhere in the project
- The choice to exclude transients when you export Testsheets to XML or JSON
- A decrease in the time needed to build a vocabulary by streamlining the attribute creation process
- The ability to select and republish specific Ruleflows for packaging and deployment from the Project Explorer view—particularly valuable in projects with large quantities of Ruleflows

## See What's New in Corticon 5.7

Corticon is designed to help businesses automate sophisticated decision processes, without having to write code. The latest release further supports that vision, enabling users to tame complex rules through efficient batch processing, greater access to multiple data sources, detailed comment features for key stakeholders and increased developer usability.

Gain greater control of your business processes by up to 90%. Try the latest version of Corticon today.
