Progress® Automate MFT

Cloud-Native File Transfer Automation

DATA SHEET

KEY BENEFITS

✓ Replace manual file transfers with efficient, reliable automation

✓ Reduce reliance on fragile or hard-to-manage scripts

✓ Enjoy a 50% lower total cost of ownership than on-premises solutions

✓ Minimize the cost of bulky hardware, major upgrade projects and downtime

✓ Scale confidently with a cloud-native, SaaS solution

✓ Remain audit-ready by managing file workflows in one place

Easily design, manage and scale essential file workflows using advanced no-code tools built for modern IT.

Moving Sensitive Data and Mission-Critical Files is a Daily Strain

Every day can feel like a balancing act—keeping critical data moving, meeting security and compliance demands and holding fragile file transfer systems together with limited resources. The result is constant firefighting, mounting risk and little time for strategic work.

Productivity Inhibitors	Legacy File Transfer Solution Challenges
Script creation and management	Bolted-on security
Unreliable file delivery	Limited scalability
Compliance audits	Bulky and aging infrastructure
Upgrade projects and patch cycles	Shadow IT

Turn File Transfer Chaos into Control

Stop fighting fires and start moving your business forward. Progress® Automate MFT equips IT teams with a robust file transfer automation solution leveraging cutting-edge cloud technology delivered and managed by Progress experts. This advanced platform streamlines workflow creation with an intuitive point and click interface, promoting a more secure transfer with market-leading encryption, security and privacy features. Effortlessly build, schedule and scale secure file transfers between internal systems and external partners with lightweight agents deployed where you need them—on premises, in the cloud or in private networks.

Key Features

SaaS Simplicity, Enterprise Power

- Professionally managed by Progress
- Minimal footprint by local agents and deployment in as little as 15 seconds
- Datacenters in North America and Europe
- Elastic scaling as demands grow

Centralized Control for Global Enterprises

- Coordinator-agent topology
- Task progress, updates and details in one centralized view
- Task organization by folders and tags
- Library for endpoint, credential and schedule management
- Light and dark modes

No-Code Interface

- File processing (zip/unzip, PGP) and macros available out of the box
- Simple and multi-step/logic-based task builder
- Scheduled and on-demand task prompting
- Rapid task updates and reverts
- Single task orchestration of multiple sources and destinations
- Email notifications

Developed to Support Security and Compliance

- Configurable access controls
- File encryption in transit
- Multi-Factor Authentication (MFA)
- Audit logs
- SOC 2 Type 1 and HIPAA Type 1 certified and GDPR ready

Built for Hybrid

- Progress and self-hosted agents controlled from a central cloud engine
- File movement using SFTP, FTPS, HTTPS, SMTP and CIFS/SMB/ UNC protocols
- Cloud application integration with Progress® ShareFile® software, Amazon Web Services (AWS) S3 and Microsoft Azure Blob
- Connections to on-premises endpoints from Progress® MOVEit® software and Progress® WS_FTP® software
- Cross-platform compatibility with Windows and Linux
