

MOVEit® Automation

Easily build no-code workflows to reduce repetitive manual data exchanges

DATA SHEET

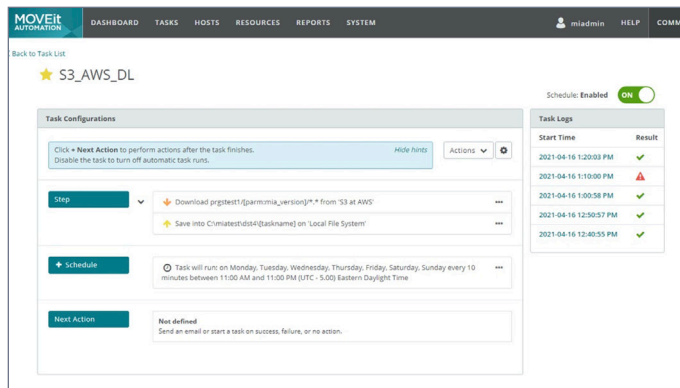

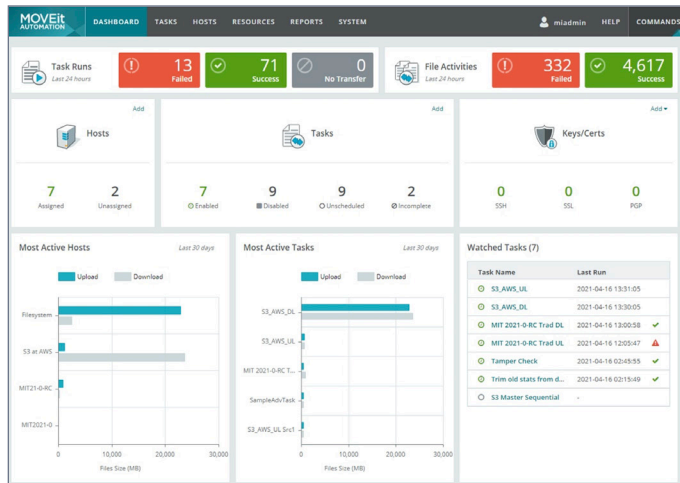

KEY BENEFITS

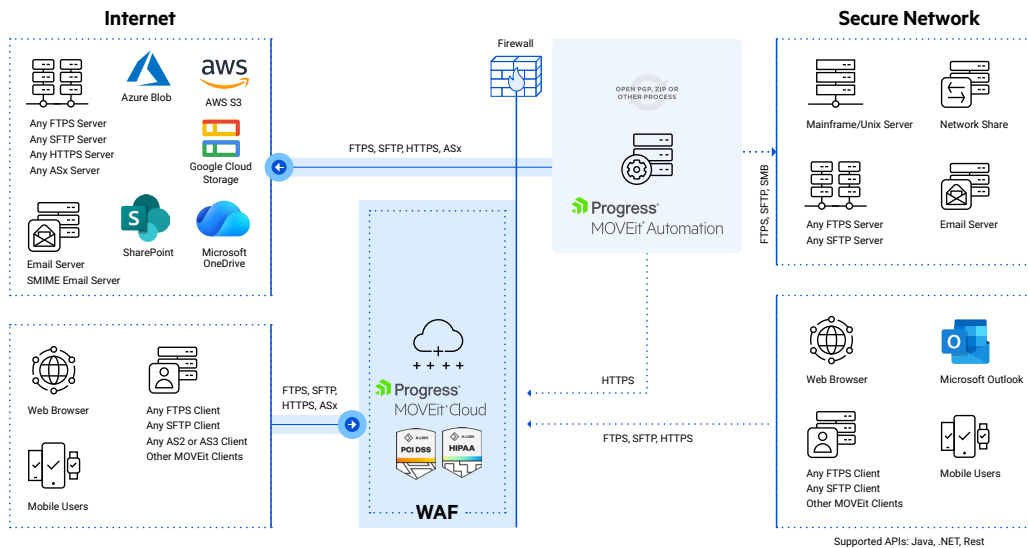

- ✓ Automate routine and repetitive file transfer and file processing tasks
- ✓ Build multi-step, logic-based workflows and implement business process rules without the need for programming skills
- ✓ Reduce the risk of data loss or missed SLAs
- ✓ Enforce encryption, authentication and logging across all transfers
- ✓ Integrate across legacy, hybrid and cloud-based IT estates

Powerful and Adaptable File Transfer Automation

IT teams across industries face increasing pressure to streamline and secure data movement between systems, partners and users. But manual file transfers and custom scripts come with serious challenges and growing risk. Human error, security gaps, unscalable processes and visibility gaps all threaten the success of business workflows.

MOVEit Automation software is the industry-leading file transfer automation solution trusted by IT teams worldwide to minimize potential errors, reduce inefficiencies and promote secure data delivery. Setup is simple with out-of-the-box, point-and-click task deployment to orchestrate thousands of tasks across your hybrid tech stacks and with partners. MOVEit Automation also helps you enforce encryption, authentication and logging across all transfers with file automation software backed by SOC 2 Type 2 and ISO 27001 certifications.

MOVEit Automation is part of the MOVEit family of products, and it can also be used on its own.

MOVEit Automation Features

Protocols & Connectors

- FTP
- SSL/FTPS
- SSH/SFTP
- SMTP/POP3 (Email)
- HTTP/HTTPS
- MOVEit Transfer
- CIFS/SMB UNC File Shares
- Amazon S3, Azure Blob, Microsoft OneDrive, SharePoint Online, Google Cloud Storage
- AS1, AS2 and AS3
- API (REST, java, windows COM)

Security

- Transport encryption ("Data-In-Transit")
- Modern cryptographic foundation (OpenSSL 3.0)
- TLS 1.3 support
- Encrypted administrative access
- File integrity checking
- Non-repudiation
- Anti-virus integration

- Cryptographic tamper-evident logging
- OpenPGP encryption
- Limit user access: view only, run tasks or configure tasks
- Automatic failed login IP/username lockout mechanism

Automation & Productivity

- Easily create and manage complex workflows
- Run processes on a scheduled, event-driven and on-demand basis
- Multiple tasks can be run together simultaneously
- Pull, process and push files among all platforms/architectures/OSS
- Synchronization of files and folders on different systems
- HTML-formatted task-status emails
- Built-in scripts and macros
- Custom scripting options for enhanced integration

- Group tasks to align with processes or hosts
- Advanced tasks with conditional logic including step disable and embedded comments
- Upload and download virtually any filename across any language

Administration

- Web-based administration
- Remote host, task management and task execution monitoring
- Delegation of permissions (host/tasks, groups/users)
- OIDC-powered single sign-on (SSO)
- Integration with MySQL (included), Microsoft SQL server, azure SQL server or Microsoft SQL on AWS RDS

Availability & Disaster Recovery

- Disaster Recovery - Active-Passive
- Automated Failover
