OVERVIEW

Today your business competes in an ever-changing, always-connected environment with a growing demand for solutions for the mobile workforce. Mobility is more than just a trend; it has evolved into a revolution that has transformed the way we do business and quickened the pace of change for Application Developers and IT departments. It’s an expectation. In a recent survey¹, 92% of businesses stated the adoption of mobile apps would give them a competitive edge. If your business is not taking steps to address this need, you are falling behind the competition.

WHAT IT DOES

OpenEdge Mobile provides an integrated, “everything-in-the-box” mobile UI development platform to quickly and easily extend existing, or create new, OpenEdge applications to support mobile users. With the new OpenEdge Mobile App Builder and visual designer, you can produce feature-rich mobile apps for the iOS and Android platforms, with a “write once, run anywhere” approach.

BENEFITS

DEPLOY SECURE, END-TO-END MOBILE SOLUTIONS

Enhance existing applications, or create new ones, with mobility support to increase competitiveness and grow the business. Mobile apps can be HTML5 Web apps or native apps targeted for distribution via an app store. This hybrid approach to mobile app development enables developers to target multiple device types/families with a single code-base.

BUILD MOBILE APPS FASTER

The cloud-based OpenEdge Mobile App Builder component of OpenEdge Mobile allows developers to build and rapidly prototype mobile app UI’s by dragging-and-dropping jQuery Mobile controls onto a canvas. OpenEdge Mobile incorporates both Web Server and REST Adapter components allowing developers to build and test mobile apps end-to-end in a fully integrated environment. The OpenEdge Mobile App Builder provides visual support for binding data to payload requests and the handling of UI events. The JavaScript Data Object (JSDO) facility available on the mobile client shields the developer from the complexity of handling communication via REST/JSON with back-end OpenEdge resources.

Jumpstart your Mobile development with OpenEdge Mobile’s fast and easy “write once, run anywhere” solution.
**PRESERVE BUSINESS LOGIC AND DATA**

Advanced tooling in the Eclipse-based **Progress Developer Studio for OpenEdge** IDE enables developers to easily build service interfaces to business logic housed in the OpenEdge AppServer. For an existing abstract schema (TempTable or ProDataSet), wizard-based tooling can automatically generate ABL code for RESTful CRUD (Create, Read, Update, Delete) services. With **co-packaged Web Server, REST Adapter and Spring security templates**, developers can deploy and test Applications end-to-end. Deployment administrators can tailor Spring security templates to support the secure deployment of business-critical Applications.
