

LEAVE NO DATA BEHIND

In Hybrid Data Landscapes

Four of the top six SaaS vendors have partnered with us around connectivity.

All data exposed through a single interface (ODBC, JDBC or OData)

Secure access to data behind the firewall from your cloud application—with almost no implementation effort for your customers. DataDirect “Project Mustang” resides in your cloud, enabling customer access to on-premises data via an easy-to-install on-premises component.

These days there’s data floating around everywhere. You practically need elite athlete skills to clear the hurdles blocking efficient connectivity to on-premises and firewall-protected data sources. Now, Progress DataDirect will completely change the way cloud applications access data.

Embedded Data Access Layer

Deploy a Complete Data Access Layer Within Your Cloud

This light weight connector is designed to embed in your public or private cloud application to provide secure access to data residing on-premises, behind a firewall or in other clouds.

Blast Through the Firewall—Securely

Distribute on-premises connectors to your customers to securely access data behind the firewall, without requiring SSH tunnels, reverse proxies or any changes to the firewall.

Under Proven Technology

This solution is based on proven and award winning technology that has been deployed in the DataDirect Cloud for more than two years.

One Connection, Unlimited Data Sources

Develop the data access layer for your external data strategy against a single industry standard API—ODBC, JDBC, REST or OData—to access data across Cloud, RDBMS, Big Data and NoSQL.

Your customers can:

- Overcome data integration objections to adopting your cloud
- Accelerate go-live dates with self-service integration capabilities
- Lower expensive integration fees that can cost 5x more than your license
- Make better decisions with easy access to relevant external business data

How is this different from other cloud integration tools?

This provides real-time, direct data connectivity using industry standard interfaces across SQL and REST.

Start Your DataDirect “Project Mustang” Preview

- Get a firsthand look at the latest innovation in cloud connectivity
- Gain exclusive access to our product teams
- Steer the product roadmap toward your technology
