Overview

MarkLogic University Certification Tracks

- MarkLogic Certified Developer Written and Hands-on Exam
- MarkLogic Certified Administrator Written Exam and Hands-on Exam
- MarkLogic Certification Maintenance Exam Written Exam

General Preparation:

To prepare for the MarkLogic Developer and Administrator Certification program it is recommended that you have:

- Attended formal MarkLogic University training.
- Performed your own research and self-study.
- Obtained real world professional experience using MarkLogic.

Resources:

MarkLogic Certified Developer - Written Exam

In this section you will learn more about the MarkLogic Certified Developer written exam. You will learn about the category breakdown and some example topics within each category to help focus your studies.

Category	Key Topics	Key Topics
Architecture	MarkLogic architecture: Databases, Forests, Application servers, Hosts (E-Node/D-node), Groups, Caches	Clusters: Merge, Rebalancing, Scalability
XPath & FLWOR (XQuery exam only)	XPath expressions, predicates, and axes	XQuery - structure and syntax
2 7 7/	FLWOR expression logic	
Using the Node.js API	Database clients	Callbacks, promises and streams
(Node.js exam only)	Document Descriptors	
Using the Java API	Database clients	CRUD operations Handles
(Java exam only)	Document Managers	CRUD operations
Indexing	Element and attribute range indexes	Tokenization and stemming concepts
	String range indexes and collation Term List indexes	Working with data across
	Reverse index	multiple languages and its
	Reindexing	impact on indexes
Search	<u> </u>	Query tuning functions
Search	Search relevancy, query weighting, document weighting	such as plan()
	Filtered versus Unfiltered search	Search across multiple
	Using query constructors	languages
T 1 D T		
Template Driven Extraction	Creating and using templates	
Optic API	Creating Optic plans	
	Selects	
	Joins	
SQL	SQL configuration	
	SQL queries	

Category	Key Topics	Key Topics
Data Modeling	Using mlcp to ingest and transform documents Loading and managing data using the Client REST API Managing binary documents Using fields	Data modeling choices and the impact on indexes and query resolution Denormalization The envelope pattern
Transactions	MVCC Single statement transactions Multi statement transactions Distributed transactions	Point-in-time queries versus Queries that require locks Server-side functions like invoke(),eval(), and spawn()
Security	Roles and users Application server security Permissions Privileges	Managing security on code in a modules database Redaction Element-level security
Semantics	SPARQL query language Named graphs and collections Using the sem functions Using the cts semantics functions	Loading and managing RDF data with mlcp Data modeling of triples in MarkLogic

MarkLogic Certified Developer Hands-On Exam

Prerequisite: Passing the Developer Written exam

The Hands-on exam is deliverable based. Participants are provided access a hosted virtual machine which will have all the necessary software, data, and instructions required to complete the hands-on exam. You will have up to 4 hours to complete the deliverables according to the requirements defined in the instructions.

The Proctor provides the access details to the virtual machine and the instructions during your handson testing session. All deliverables will be saved to the virtual machine. The Proctor will evaluate your submission and provide your results within one week of completing the hands-on exam.

Deliverables	
Data Loads	Modification of ingested documents
Database Transactions	Optic API Queries
Searches	Query analysis and tuning
SPARQL Queries	

MarkLogic Certified Administrator - Written Exam

In this section you will learn more about the MarkLogic Certified Administrator written exam. You will learn about the category breakdown and some example topics within each category to help focus your studies.

Category	Key Topics	Key Topics
Installation and Configuration	System requirements	Groups
	Installation steps	Admin Interface
	Licensing	REST API
	Cluster deployment	ml-gradle
	Ports	Documentation
Monitoring	Log Files	Management API
	Dashboards	Meters
Databases	Creation techniques	Storage
	Forests and Sizing	Ports
Roles and Users	Creating roles	Privileges
	Role inheritance	Creating users
Data Loading	Data modeling	Document permissions
	APIs for loading	MIME types
	URIs, Directories and Collections	CPF
Updates, Merges, and	Modifying documents	Stands and merging
Transactions	Batch updates	Transactions
	CoRB	Locking
	Data Movement SDK	
Search	APIs	SQL
	Stemming	Optic API
	Triples	
Serving Data	App servers	Data service
	Modules	Automating deployment
	REST	
Indexes	Understanding uses	Range indexes
	Types of indexes	Sizing
	Optional indexes	

Category	Key Topics	Key Topics
Security	Roles, users, and privileges	Element-level security
	Security database	Redaction
	Encryption at Rest	Granular privileges
	SSL for hosts	Auditing
Resizing	Forest sizing	Retiring forests
	Adding forests	Removing a host
	Rebalancing	
Backups	Location	Incremental backups
	Doing a backup	Restoring
	Scheduling backups	Point-in-time restore
High Availability	Forest Replication	Database Replication
	Failover hosts	Flexible Replication
Tiered Storage	Purpose	Range partitions
	Assignment policy	Query partitions
Performance	Common factors	Sorting
	Unfiltered vs. filtered search	MLCP -fastload
	Cache hits and misses	
Upgrading	Single host	
	Rolling upgrade	
	Best practices	
Support	Contact	Telemetry
	Handbook	Dump file

MarkLogic Certified Administrator Hands-On Exam Overview

Prerequisite: Passing the Administrator Written exam

The Hands-on exam is deliverable based. Participants are provided access a hosted virtual machine which will have all the necessary software, data, and instructions required to complete the hands-on exam. You will have up to 4 hours to complete the deliverables according to the requirements defined in the instructions.

The Proctor provides the access details to the virtual machine and the instructions during your handson testing session. All deliverables will be saved to the virtual machine. The Proctor will evaluate your submission and provide your results within one week of completing the hands-on exam.

Deliverables	
Creating a cluster	Backing up a database
Defining a database, forests, and REST API instance	Retiring and un-attaching forests
Creating roles and users	Creating forest replicas
Loading documents	Enabling telemetry
Defining indexes	Creating granular privileges
Deploying a data service	

MarkLogic Certification Maintenance Exam

Prerequisite: Participants must be MarkLogic Certified Developers or Administrators

MarkLogic will offer the **MarkLogic Certification Maintenance Written exam** for key MarkLogic Server new releases. This exam provides the unique opportunity for Certified Developers and Administrators to upgrade their MarkLogic Developer and/or Administrator certification credential.

Participants will also receive an updated Badge and Certificate for their LinkedIn Profile and Business Card.

This exam consists of the following:

- \$75 (USD)
- 35 Multiple Choice and True/False Questions
- Maximum Time Limit: 60 Minutes
- Pass Mark: 74%

Exam Preparation Resources:

Questions are based on the following resources:

- ML 12 Release Notes https://docs.progress.com/bundle/marklogic-server-whats-new-12/page/topics/release-notes.html
- What's New in MarkLogic 12 recording https://www.progress.com/resources/thank-you/what-s-new-in-progress-marklogic-server-12
- MarkLogic Flux:
 - User Guide https://marklogic.github.io/flux/
 - Community Recording: https://www.progress.com/resources/thank-you/marklogic-community-event-october-edition-2024

Question Categories		
Dynamic Hosts	Flux Import and Reprocess	
Virtual Views	BM25	
MarkLogic – Release Notes	ANN Indexing	
Vector Search	Shortest Path	
Upgrade		

Taking a Written Exam

In this section we will cover important general information about what to expect during your testing appointment, including what will happen before the exam begins, during the exam, and after the exam is completed.

• Before the Exam

- 1. The exam proctor will direct you to a site where you will review the instructions for taking the exam.
- 2. The exam Proctor will then validate your contact information, identity, and testing environment through the use of your web cam and government issued photo ID.
- 3. Once your identity has been confirmed, the exam Proctor will provide you with an exam key which you must enter in order to begin. Exam keys are only valid for your specific testing event and will not be provided in advance. Without a valid exam key, the system will not enable you to take the exam.
- 4. The final step before starting the exam is to review and accept the Terms and Conditions of the Certification Program.

During the Exam

- 1. Each exam will consist of 50 questions. Certification upgrade exams between versions of MarkLogic software may be less than 50 questions.
- 2. Every exam will be different; however, the distribution of questions across categories and the weight of questions within categories will be the same for each exam attempt.
- 3. You will have 60 minutes to complete the exam, starting from the time you are presented the first question.
- 4. Each question may be skipped once. Skipped questions will then be presented back to you after all other questions have been answered.
- 5. Do not close the browser window until your exam is complete. If you accidentally close it, please contact the exam proctor and they can help you resume the exam, as long as there is time remaining.
- 6. The back button on your browser will not function during the exam. Instead you may skip questions once and answer them at the end.
- 7. The exam will automatically finish when you have either submitted answers for all the questions or time expires.

• After the Exam

- 8. Upon completion of the exam, your results will be saved in the system, displayed on your screen, and sent to the email address provided when you entered your contact information.
- 9. To pass the exam you must answer at least 37 out of 50 questions correctly.
- 10. You will be provided a breakdown of your score overall and by category. You will not be shown the exact questions that you answered correctly or incorrectly.
- 11. If successful in passing the exam, the next step is to enroll in a hands-on testing event. If unsuccessful in passing the exam, you may retry by enrolling in another written exam testing event.
