Course title

Sitefinity Training for Developers

Audience

Web Developers

Description

Get full control over your website using the Sitefinity API and the powerful Sitefinity Fluent API. You'll learn in detail how to manipulate all the CMS manager objects in the system, from querying website formation to creating, updating and deleting content. You'll learn how to develop templates, custom widgets and custom modules. You'll also learn script debugging, AJAX tips & tricks and integrating jQuery functionality in your own widgets.

Version compatibility

This course is compatible with Sitefinity version 7.x and above.

What you will learn

After taking this course, you should be able to:
- How to work with Sitefinity projects in Visual Studio
- How Sitefinity builds on familiar technologies you already know
- How to use the Sitefinity API and Sitefinity Fluent API
- Key manager objects used to query and perform CRUD (Create Read Update Delete) operations on Sitefinity data
- How to extend existing features
- How to develop custom templates, widgets and modules
- How to debug script
- AJAX Tips and Tricks
- How to integrate jQuery to a widget (the class demonstrates building a custom workflow to explain the concept)

Prerequisites

Students should:
- Have a working understanding of ASP.NET development practice
- Have some familiarity with MVC
- Have working knowledge of C#
- Have working knowledge of JavaScript
