

Leading Payment Services Enterprise Leverages Progress Infrastructure Management Tools to Support Billions in Annual Transactions

AT A GLANCE

A leading North American payment services enterprise relied on key solutions from Progress' Infrastructure Management portfolio, including Progress® WhatsUp® Gold for network monitoring and the Progress® Kemp® LoadMaster® solution for application availability. As cybersecurity talent shortages intensified across the industry, the organization recognized the need to strengthen its threat detection and response capabilities without expanding headcount. After deploying the AI-powered Progress® Flowmon® Anomaly Detection System (ADS), the security team improved the speed and accuracy of identifying and mitigating threats by six times.

COUNTRY

North America

Challenge

A leading Payment Services Enterprise wanted to enhance operational efficiency in detecting and responding to network security anomalies.

Solution

Deploy the Flowmon cybersecurity solution across the enterprise's numerous North American data centers

Utilize the AI capabilities of Flowmon ADS to minimize threat detection and response times

Use the Flowmon Network Security Analysis capability to improve identification and mitigation of threats while maintaining always-on operations

Expanded the security team's capabilities to pinpoint root causes and enhance threat response efforts

Decreased network resolution time by six times and response times down from hours to minutes

Continued to expand their business operations without having to expand its employee

Transform your network, applications and underlying infrastructure with **Progress Infrastructure Management software.**
