

How GreenSky Strengthened Governance and Secure File Sharing with ShareFile Software

AT A GLANCE

GreenSky is a financial technology company providing point-of-sale financing for home improvement, solar and healthcare purchases. With over 10,000 merchants and more than one million customers relying on its platform, GreenSky requires rigorous security to protect sensitive financial information. ShareFile software enabled GreenSky to rebuild governance, reduce risk and strengthen compliance.

Challenge

With more than one million customers and over 10,000 merchant partners, GreenSky needed a better way to manage and share sensitive financial documents across teams. The goal was better oversight, improved visibility and less reliance on manual processes.

“We really secured our environment better... that alone saved us tons of money and kept us out of the news – and no news is good news.”

Robert Wessel
Security Engineer, GreenSky

Solution

Implemented ShareFile software to centralize document sharing and provide a more consistent way for teams to manage sensitive files

Gained better visibility into document activity, helping teams track access, monitor sharing and maintain stronger oversight of financial files

Reduced manual processes by introducing structured, automated workflows

Results

Established a more consistent approach for managing and sharing files across teams

Improved visibility into document activity, helping teams better track, access and maintain oversight of sensitive financial information

Reduced manual process by introducing automated workflows, helping teams handle documents more efficiently

Discover how ShareFile software can help streamline document sharing and improve visibility
