

Innovative Edge Processing: Transforming Chaos into Confidence

AT A GLANCE

Innovative Edge Processing needed a better way to securely and efficiently manage sensitive financial paperwork. Progress ShareFile software helped IEP streamline document exchange workflows and improve visibility, while the e-signature feature enabled faster turnarounds and smoother closings.

Challenge

IEP managed a large volume of sensitive mortgage documents across email and shared folders. Chaotic, unstructured workflows created bottlenecks and made it difficult to locate the right files quickly. With multiple stakeholders involved, missing paperwork, slow document exchange and delayed execution negatively impacted closing timelines and the client experience.

“ShareFile is just so much part of my daily routine that it would be extremely hard for me to do my job as professionally and as well as I do it now without it.”

Gina Wariebi,
Owner and Operator,
Innovative Edge Processing

Solution

Created centralized, secure storage for documents where officers, borrowers and clients could quickly and easily access files

Streamlined document exchange processes to reduce back-and-forth and keep workflows moving without email

Implemented the ShareFile e-signature feature to speed up approvals and reduce delays from traditional printing and scanning

Supported fast and secure large-file sharing to keep teams and closings on schedule

Results

Improved document visibility and organization with centralized files and efficient document tracking

Reduced turnaround times with documents completed in minutes or hours instead of days

Increased professional confidence, enabling teams to manage complex cases with peace of mind

Helped improve client experience with faster document exchange and easier signing
