

How a Global Enterprise Scaled Supplier Onboarding with Podio Automation

AT A GLANCE

When this global aerospace organization outgrew their legacy supplier onboarding system, manual processes and poor data visibility slowed operations and frustrated internal teams. By modernizing workflows with Progress Podio software, the organization automated data handling, improved collaboration and created a scalable onboarding system.

Challenge

A partner-built onboarding system lacked scalability and standardization, forcing teams to rely on Excel filtering, manage duplicate supplier records and navigate inconsistent data formats. Limited visibility and manual work created inefficiencies, slowed vetting processes and reduced internal confidence.

“The Podio platform is automating critical processes such as supplier categorization, which reduced risk of errors and improved efficiency.”

– Administrator

Solution

Automated supplier data formatting to enable real-time filtering and eliminate Excel-based vetting workflow

Rebuilt supplier profiles so external users securely update existing records instead of creating duplicates

Standardized workflows using native Podio terminology for easier administration and long-term system ownership

Results

Eliminated manual Excel workflows, saving hours per week for vetting teams

Reduced thousands of duplicate records, improving accuracy and operational efficiency

Enabled scalable supplier onboarding without adding staff or increasing overhead

Unify and automate your work with Podio.
