

# THE FASTEST WAY TO TURN IDEAS INTO BUSINESS REALITY

## OVERVIEW

Businesses require powerful applications with purpose. Today, business works in the palm of your user's hands—so your applications must work there as well. To meet business user expectations, your company must have a simple way to create apps fast without relying on deep technical skills or expensive IT resources. Apps must connect to critical data in real-time. And they must be able to analyze data results immediately.

## WHAT IT DOES

Progress® Pacific™ is a modern Platform-as-a-Service (PaaS) that makes it easy for businesses to rapidly build data-driven apps and deploy them on any cloud or device. The Pacific (PaaS) gives you the freedom to choose the data sources, deployment environments and business logic that best fit your needs. Support your enterprise, developers and customers with cloud-enabled applications and grow into new markets with Progress Pacific.

## BENEFITS

### CREATE NEW APPS FAST WITH MINIMAL CODING

Modern application development is about the immediate ability to turn ideas into deployed solutions. Your customers want to move from "What if?" to "Now I can" as soon as tomorrow. Your Pacific installation includes a rapid application development platform that works within a web browser. Using visual tools, developers can build web and mobile apps with more clicks than keyboard taps—and write as much as 80% less code.

### DESIGN FOR EASY DEPLOYMENT TO ANY MOBILE DEVICE

A simple "one-click" option mobilizes apps quickly for mobile web deployment. Or build mobile device-specific apps through an intuitive visual builder. Publish resulting binaries to app stores for users to access in a familiar way. Push notification technology is also supported by Pacific Cloud Services, delivering the possibility of enhanced engagement with mobile app users.

### INTEGRATE, ANALYZE AND SHARE DATA

Data isn't everything—it's the only thing that matters to users. With Pacific, your application can tap into the most data sources available in the cloud to develop

## HIGHLIGHTS

- ▶ **Rapid application development:** Browser-based visual design requiring minimal coding
- ▶ **Mobile & Web:** Create apps tailored for the best web and mobile experience
- ▶ **Data driven:** Connect your app to the data used inside your company and by your customers
- ▶ **Gain business insight:** Self-service data integration, report building and collaboration
- ▶ **Platform Services:** Core architectural and governance services enable an extensible platform
- ▶ **Flexible cloud-native deployment:** Deploy on the infrastructure that best fits your business; on-premise, public or private cloud

automated, context-aware applications. Connect to all your important data sources, no matter where they reside, via a single interface. Whether connecting to data in the cloud or on-premise, developers can simply add new data sources without having to rewrite code.

## EMPOWER USERS TO CREATE AND SHARE REPORTS

Providing apps that turn business users into superheroes requires interfaces that “think” like users. That requires providing them with a design focused on simplicity and self-service. Pacific offers an innovative new plug-in service for data integration and collaboration. Progress Pacific helps users access, blend and report on data spanning many different business applications and data sources, and share, sync and collaborate with other users without expensive data integration projects.

## ADD BUSINESS LOGIC FOR ADDED VALUE

Once you’ve come up with an idea, that idea must be translated into business logic. Pacific offers companies the ability to integrate Progress® Corticon® Business Rules Management System (BRMS) with the PaaS to help business make faster decisions. Corticon delivers high-performance, automated business rules management by separating rules from code.

Optionally, your company can add business logic using ABL, Java or with a Microsoft Excel interface.

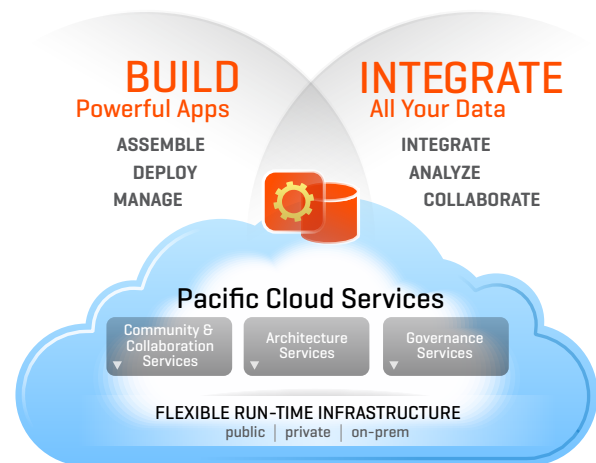

## CLOUD NATIVE PLATFORM

Progress Pacific is purpose-built for the cloud and includes core capabilities to maximize the benefits of this architecture. Community and collaboration services are built-in to the platform, enabling developers to interact with peers. Get answers quickly, share knowledge and gain insights. Critical architectural capabilities include a multi-tenant model, localization support and separation of application code from platform code for superior operations.

## OPERATE INDEPENDENTLY WITHOUT LIMITS

Your applications must be accessible across continents if you are to compete. Progress knows the challenges that small and mid-sized development teams face gaining traction today. Being constrained by a single vendor application platform or user market is no way to grow. Pacific makes it easy to deploy anywhere, on any platform or device. Choose Progress private or public hosted options, deploy on-premise, or choose your own IaaS—we’re ready to work with you, not against you.

**Figure 1.**  
Progress Pacific PaaS leverages the industry-leading strengths of the Progress Portfolio and new cloud-based data connectivity, integration and reporting tools.

## ABOUT PROGRESS PACIFIC

Progress Pacific is a modern platform-as-a-service (PaaS) that enables the rapid creation and deployment of powerful, data-driven business applications with minimal coding by using point-and-click, drag-and-drop tools in a web browser. To learn more about how your team can enable the next generation of business applications with PaaS, or to begin evaluating Progress Pacific, visit [progress.com/pacific](http://progress.com/pacific).

### PROGRESS SOFTWARE

Progress Software Corporation (NASDAQ: PRGS) is a global software company that simplifies the development, deployment and management of business applications on-premise or in the cloud, on any platform or device, to any data source, with enhanced performance, minimal IT complexity and low total cost of ownership.
